                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Center: Whitehead Institute/ MI3 Center for Genome Research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the paps are unknown. This record will be updated with the finished sequence as soon as it is available and the arcession number will.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   consists of 39 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTE: This is a 'working draft' sequence. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The clone sequenced to the left is RPI1-62B4. Actual start of this clone is at base position 1 of RPI1-389E17; actual end is at base position 206966 of RPI1-389E17.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTICE: This sequence may not represent the entire insert of this conne. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence was finished as follows unless otherwise noted: all requons were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as Compressions and repeats; all regions were covered by sequence from more time none subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Center: Washington University Genome Sequencing Center Center code: WUGSC

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sample of seasons for arbitrary closes that may be generated as lower overlap relationships among closes to be deduced. However, it should not be assumed that his chone will be sequenced to completion. In the event that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               will be sequenced to completion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 configs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sequencing reads that have not been assembled into

Loughitted (14.5EP-1998) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On Sep 18, 1998 this sequence version replaced gi:3550203.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         HS931E15 81874 bp DNA linear PRI 23-NOV-1999 Human DNA sequence from clone 931E15 on chromosome X425. Contains STSs, GSSs and genomic marker DXS8098, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         http://www.sanger.ac.uk/HOP/ChrX
931E15 is from the library RPC15 constructed at the Roswell Park
Cancer Institute by the group of Pieter de Jong. For further
details see http://bacpac.med.buffalo.edu/ VECTOR: pCYPAC2
IMPORIANT: This sequence is not the entire insert of clone 931E15.
It may be shorter because we only sequence overlapping sections
once, or longer because we arrange for a small overlap between

Care Translate Industries: Industries: Industries: A concentration of Sep 27, 2000 this sequence version replaced at 6006528.

On Sep 27, 2000 this sequence version replaced at 6006528.

On sequence assembly date is compared troin overlapping clone differences are found these are annotated as variations together with a note of the overlapping clone, as we sutchin substitution annotation may not be found in the sequence substitution only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases.

Em: EMBL: Sw.: SWISSPRYP: Fr.: TREMBL: WP. WEMMER: information on the WORMPRP database can be found at the WEMPER: information on the WORMPRP database can be found well-4702 it may be sequence is not the entire insert of clone RPI-4402 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.

The frue left end of clone RPI-24702 is at 1 in this sequence. The true right end of clone RPI-8918 is at 98261 is this sequence. This regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality > 30): an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were aborded by at least, one plasmid subscione or more than one MBS autoclose; and the assembly was confirmed by regions were propered to be found the assembly was confirmed by regions were propered to be found the assembly was confirmed by regions were propered to be found the assembly was confirmed by regions were propered to be found the assembly was confirmed by regions were propered to be found the assembly was confirmed by regions were propered to be found to be assembly was confirmed by the found to be an one plasmid subscioned to the plasmid subscioned to the plant of the plant of the plant of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      assembly was confirmed by restriction diquest, RPI-247C2 is from the library RPCI-1 constructed by the group of Pieter de Jong, For

On Jun 13, 2002 this sequence version replaced al:2126:816.

On Jun 13, 2002 this sequence vorsion replaced al:2126:816.

On Jun 13, 2002 this sequence assembly data is compared from coverlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone same. Note that the variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Eukaryola; Metazoa; Chordata; Craniata; Vettebrata; Buteleostomi;

corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >- 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by at least one plasmid subclone or more than one MI3 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em. EMBL: Sw.; SWISSPRYT TT. TREMEL; WPP.; WORMPEP; Information on the WORMPEP database can be found at the polyworm per this sequence was generated from part of bacterial cone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome I Mapping group. This is a "orking draft' sequence. It currently
consists of 12 contigs. The true order of the pieces
is not known and their order in this sequence record is
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    pe preserved.
